McKinsey & Company

Casablanca, Morocco

Dear McKinsey Casablanca,

I am writing to subscribe to the new leader program digital and analytics and become a consultant, as announced on your web site and explained by your team here in Algeria during the conference. I am a graduate student (5th year) at the national higher school of computer science ESI Algiers, very motivated and active young, ready for new challenges and solving complex problems

In your application post you ask for a person who demonstrate aptitude for analytical and quantitative problem-solving skills and for programming. I did the mathematical branch in high school, because I really like logic and mathematical thinking, I always analyze the problems and represent them in the form of a mathematical model, and after the baccalaureate, I choose the higher school of computer science where I learned the algorithms and modular programming to solve the problems. and through the different projects that we do in school, I have very developed my analytical spirit and my programming skills.

For group work, I have always been very committed and responsible. I always respect my colleagues and I finish my tasks in the delaines

I am very involved in entrepreneurship, I participated in several ideation competitions where I was for the majority the leader because of my social qualities, ability to delegate, communication, commitment and creativity.

last year, I launch my own startup called ipsumIT specialized in IT development and consulting, and we launched an innovative platform called Makelti.com to reduce food waste in companies and universities refractories

I'm talented in communication, specifications collection and problems detecting, so I worked as an IT junior freelance consultant with several clients

I'm very interested and motivated to become a part of the international mckinsey consultant team and build my career as a professional digital and analytics consultant

Madani Djamel

Sincerely
